

Intrinsically Safe: EB3C Discrete Input Barriers

Key features:

- Applicable Standards
IEC60079 compliant
Dry-contact switches can be connected to the EB3C
- 8- and 16-circuit types are available in common wiring types, ideal for connection to PLCs (DC voltage only)
- Universal AC power voltage (100 to 240V AC) or 24V DC power (UL rating: 100 ~ 120V AC)
- No grounding required
- IDEC's original spring-up terminals minimize wiring time
- Installation: 35-mm-wide DIN rail mounting or direct screw mounting
- Global usage
 - USA: UL/FM
 - Europe: CE marking,
 - Global: IECEx ATEX
 - Japan: TIIS
 - China: CQST
 - Korea: KCs
 - Ship class: NK (Japan), KR (Korea pending)

Entity Barrier Parameters

Ta= 60°C, Um= 250V, (Um=125V UL only), Uo=13.2V, Io= 14.2mA, Po= 46.9mW at each channel
Pn-Nn Io=227.2mA, Po= 750mW at max 16 channels Pn-Nn

Io(mA)	14.2	28.4	42.6	56.8	71.0	85.2	99.4	113.6	127.8	142.0	156.2	170.4	184.6	198.8	213.0	227.2	Combined

Dry Contact Switches

Dry-contact switches can be connected to the EB3C.

Spring-up Fingersafe Terminals Reduce Wiring Time

Connector Type

MIL connector on the non-hazardous side

- Easy connection to PLCs
- Wiring reduced
- Various 20-pin MIL connectors can be connected

Common Wiring for PLC Inputs

8- and 16-circuit types are available in common wiring types, ideal for connection to PLCs (DC voltage only).

Specifications

EB3C Electrical Specifications

Ratings		See Certification Numbers table below	
Degree of Protection		IP20 (IEC60529)	
Installation Location	Discrete Input Barrier	Safe indoor place (non-hazardous area)	
Non-intrinsically Safe Circuit Maximum Voltage (Um)		250V AC 50/60Hz, 250V DC 125V AC 50/60Hz, 125V DC (UL rating)	
Intrinsically Safe Circuits	Wiring Method	1-channel Separate Wiring	16-channel Common Wiring
	Rated Operating Voltage	12V DC $\pm 10\%$	
	Rated Operating Current	10 mA DC $\pm 20\%$	
Non-intrinsically Safe Circuits	Relay Output	Contact Configuration	1NO
		Rated Insulation Voltage (Ui)	250V AC (UL rating: 125V AC), 125V DC
		Thermal Current (Ith)	3A (common terminal: 8A)
		Contact Allowable Power	Resistive Load AC: 750 VA, DC: 72W
			Inductive Load AC: 750 VA ($\cos \phi = 0.3$ to 0.4) DC: 48W (L/R = 7 ms)
		Rated Load	Resistive Load 250V AC 3A, 24V DC 3A
			Inductive Load 250V AC 3A ($\cos \phi = 0.3$ to 0.4) 24V DC 2A (L/R = 7 ms)
		Minimum Applicable Load	0.1V DC, 0.1 mA (reference value)
		Contact Resistance	50 m Ω maximum (initial value)
		ON Time	12 ms maximum (rated voltage)
		OFF Time	10 ms maximum (rated voltage)
		Mechanical Life	20,000,000 operations minimum (at 18,000 operations/hour, without load)
		Electrical Life	100,000 operations minimum (at 1,800 operations/hour, rated load)
		Short-circuit Protection	None
	Transistor Output	Rated Voltage	24V DC
		Maximum Voltage	30V DC
		Maximum Current	100 mA (connector type: 15 mA)
		Leakage Current	0.1 mA maximum
		Voltage Drop	1.5V maximum
		Clamping Voltage	33V (1W)
		Inrush Current	0.5A maximum (1 sec)
		ON Time	0.1 ms maximum (resistive load)
		OFF Time	0.4 ms (typical) (resistive load)
		Short-circuit Protection	None

EB3C General Specifications

	AC	DC
Rated Voltage	100 to 240V AC (UL rating: 100 ~ 120V AC)	24V DC
Allowable Voltage Range	85 to 264V AC (UL rating: 85 ~ 125V AC)	21.6 to 26.4V DC
Rated Frequency	50/60 Hz (allowable range: 47 to 63 Hz)	—
Inrush Current	10A (100V AC) 20A (200V AC)	10A

Dielectric Strength (1 minute, 1 mA)		Between intrinsically safe circuit and non-intrinsically safe circuit: 1526.4V AC Between AC power and output terminal: 1500V AC Between DC power and transistor output terminal: 1000V AC
Operating Temperature		-20 to +60°C (no freezing)
Storage Temperature		-20 to +60°C (no freezing)
Operating Humidity		45 to 85% RH (no condensation)
Atmosphere		800 to 1100 hPa
Pollution Degree		2 (IEC60664)
Insulation Resistance		10 M Ω minimum (500V DC megger, between the same poles as the dielectric strength)
Vibration Resistance	Damage Limits	Panel mounting: 10 to 55 Hz, amplitude 0.75 mm DIN rail mounting: 10 to 55 Hz, amplitude 0.35 mm
	Operation Extremes (relay output only)	Panel mounting: 10 to 55 Hz, amplitude 0.5 mm DIN rail mounting: 10 to 55 Hz, amplitude 0.35 mm
Shock Resistance	Damage Limits	Panel mounting: 500 m/s ² (3 times each on X, Y, Z) DIN rail mounting: 300 m/s ² (3 times each on X, Y, Z)
	Terminal Style	M3 screw terminal
Mounting		35-mm-wide DIN rail or panel mounting (M4 screw)
Power Consumption (approx.)		9.6 VA (EB3C-R10AN at 200V AC) 4.8 W (EB3C-R16CDN at 24V DC)
Weight (approx.)		390g (EB3C-R16CDN)

1	NC	NC	1	1	NC	NC	1

Note: The wiring in dashed line does not affect the operation of the EB3C.

Applicable connector is IDEC JE1S-201.

Output power for PLC outputs is supplied by the EB3C, therefore the PLC output does not need an external power supply.

Wiring Example of Intrinsically Safe External Inputs

1. Common Wiring (Maximum 16 circuits)

All input lines are wired to a common line inside the intrinsically safe switch (one common line per intrinsically safe circuit).

Some input lines are wired to a common line inside the intrinsically safe switches, while others are outside switches (one common line per intrinsically safe circuit).

All input lines are wired to a common line outside the intrinsically safe switch (one common line per intrinsically safe circuit).

2. Separate Wiring

Each input line of the EB3C makes up one independent intrinsically safe circuit.

Diagram Symbols

Serial-Parallel Connection of Switches

Notes

- As shown in the diagram on the left, the required number of "contacts in one switch" (3 contacts in the example at left) can be added to the "contacts in one switch" connected to one input channel.
- Similarly, a required number of "contacts in one switch" can be added to a common line connected to multiple input channels.
- The capacitance and inductance of the added "contacts in one switch" must be included in the calculation of the wiring capacitance and inductance in "Precautions for Operation, 5. Wiring for Intrinsic Safety, (7)".
- In addition, a required number of contacts can be added in the enclosure of "contacts in one switch." In this case, however, do not include the capacitance and inductance in the calculation of the wiring capacitance and inductance. Instead, make sure that the internal capacitance (Ci) and internal inductance (Li) are within the values shown in the table "Switch Explosion-Protection Specifications (Japan only)".

Installing the EB3C Intrinsically Safe Barriers

1. The EB3C can be installed in any direction.
2. Install the EB3C intrinsically safe barrier in a safe area (non-hazardous area) in accordance with intrinsic safety ratings and parameters. To avoid mechanical shocks, install the EB3C in an enclosure which suppresses shocks.
3. When installing or wiring the EB3C, prevent electromagnetic and electrostatic inductions in the intrinsically safe circuit. Also prevent the intrinsically safe circuits from contacting with another intrinsically safe circuit and any other circuits.

Maintain at least 50mm clearance, or provide a metallic separating board between the intrinsically safe circuit and non-intrinsically safe circuit. When providing a metallic separating board, make sure that the board fits closely to the enclosure (top, bottom, and both sides). Allowable clearance between the enclosure and board is 1.5mm at the maximum.

The clearance of 50mm between the intrinsically safe circuit and non-intrinsically safe circuit may not be sufficient when a motor circuit or high-voltage circuit is installed nearby. In this case, provide a wider clearance between the circuits referring to 5 (3) "Minimum Parallel Distance between the Intrinsically Safe Circuit and Other Circuits."

4. In order to prevent contact between intrinsically safe circuits and non-intrinsically safe circuits, mount EB3C units with terminals arranged in the same direction.

5. Maintain at least 6mm (or 3mm according to IEC60079-11: 1999) clearance between the terminal of an intrinsically safe circuit and the grounded metal part of a metal enclosure, and between the relay terminal block of an intrinsically safe circuit and the grounded metal part of a metal enclosure.
6. For installing the EB3C, mount on a 35mm-wide DIN rail or directly on a panel using screws. Make sure to install securely to withstand vibration. When mounting on a DIN rail, push in the clamp completely. Use the BNL6 end clips on both sides of the EB3C to prevent from moving sideways.
7. Excessive extraneous noise may cause malfunction and damage to the EB3C. When extraneous noise activates the voltage limiting circuit (thyristor), remove the noise source and restore the power.

Terminal Wiring

1. Using a $\phi 5.5\text{mm}$ or smaller screw driver, tighten the terminal screws (including unused terminal screws) to a torque of 0.6 to 1.0N·m (recommended value).
2. Make sure that IP20 is achieved when wiring. Use insulation tubes on bare crimping terminals.
3. To prevent disengaged wires from contacting with other intrinsically safe circuits, bind together the wires of one intrinsically safe circuit.
4. When the adjacent terminal is connected to another intrinsically safe circuit, provide an insulation distance of at least 6mm.

Switches in the Hazardous Area

1. A switch contains the switch contact, enclosure, and internal wiring. A switch contact refers to an ordinary switching device which consists of contacts only, such as a pushbutton switch. See below.

Applicable Switches

Control Switches	Push-pull Switches	Pushbutton, Foot, Trigger, Rocker, Grip
	Twisting Switches	Rotary, Selector, Cam, Drum, Thumb wheel
	Lever and Slide Switches	Toggle, Multidirectional, Wobble stick, Lever, Slide switch
Sensing Switches	Displacement Switches	Microswitch, Limit, Magnetic proximity, Door, Reed, Mercury
	Level Switches	Liquid level
	Others	Pressure, Temperature

Note: For installation in hazardous areas and connection to the EB3C, use switches which are certified, approved, or considered to be simple apparatus in relevant standards in each country.

2. When the switch has internal wiring or lead wire, make sure that the values of internal inductance (Li) and capacitance (Ci) are within the certified values.
3. Enclose the switch contact's bare, live part in an enclosure of IP20 or higher protection.
4. Depending on the explosion-protection specifications according to TIIS, the exposed area of the plastic switch operator is limited as follows:
 Exia II CT6 (EB9Z-A): 20cm² maximum
 Exia II BT6 (EB9Z-A1): 100cm² maximum
5. Attach the certification mark supplied with the EB3C on the EB9Z-A or EB9Z-A1 switch (for Japanese applications).
6. When the switch operator of the plastic enclosure has a wider exposed area than the following limits, attach a caution label.

- II C: 20 cm² maximum
 II B: 100 cm² maximum

Caution
 To prevent electrostatic charges, do not rub the switch surface during operation.
 Use a soft cloth dipped with water for cleaning.

Caution Label Example

7. For the 1-circuit separate wiring, a resistor to prevent reed switch contact welding and an LED miniature pilot light can be connected in series with the contact. See below. Use the terminal screw of M3 or larger.

Applicable Resistor Ratings

Resistance	100Ω maximum
Rated Wattage	0.5 to 3W
Type	Metal (oxide) film resistors

IPL1 series LED miniature pilot lights Output Specifications

1. When wiring the output from the EB3C, connect the non-intrinsically safe circuit to terminals A and C. The EB3C output circuit is not equipped with short-circuit protection. If required, provide a protection in the external circuit.
2. Relay Output

Some types of loads generate reverse emf (such as solenoids) or cause a large inrush current (incandescent lamps), resulting in a shorter operation life of output relay contacts. The operation life of contacts can be extended by preventing the reverse emf using a diode, RC, or varistor, or by suppressing the inrush current using a resistor or RL.

Contacts are made of gold-clad silver. When using at a small current and a low voltage (reference value: 0.1mA, 0.1V), test the contact on the actual circuit in advance.

3. Transistor Output

When connecting a small load, the load may not turn off because of a leakage current, even though the transistor output is turned off. If this is the case, connect a resistor in parallel with the load to bypass the leakage current.

When an excessively high voltage (clamps at 33V, 1W) or a reverse voltage is applied to the output terminals, the clamping circuit or output transistor may be damaged.

When driving an inductive load, be sure to connect a diode across the load to absorb reverse emf.

Example of Overvoltage Absorption Circuit

4. In the common wiring only types, the output terminals are not isolated from each other.
5. When connecting the connector type EB3C's in parallel, use one power supply to power the EB3C's. Do not connect any wiring to the C1 and C2 terminals.

Wiring for Intrinsic Safety

1. The voltage applied on the general circuit connected to the non-intrinsically safe circuit terminals of the EB3C relay barrier must be 250V AC, 50/60Hz, or 250V DC at the maximum under any conditions, including the voltage of the input power and the internal circuit.
2. When wiring, take into consideration the prevention of electromagnetic and electrostatic charges on intrinsically safe circuits. Also, prevent intrinsically safe circuits from contacting with other circuits.
3. The intrinsically safe circuits must be separated from non-intrinsically safe circuits. Contain intrinsically safe circuits in a metallic tube or duct, or separate the intrinsically safe circuits referring to the table below.

Note: Cables with a magnetic shield, such as a metallic sheath, prevent electromagnetic induction and electrostatic induction, however, a non-magnetic shield prevents electrostatic induction only. For non-magnetic shields, take a preventive measure against electromagnetic induction.

Finely twisted pair cables prevent electromagnetic induction. Adding shields to the twisted pair cables provides protection against electrostatic induction.

Minimum Parallel Distance between the Intrinsically Safe Circuit and Other Circuits (mm)

Voltage and Current of Other Circuits	Over 100A	100A or less	50A or less	10A or less
Over 440V	2000	2000	2000	2000
440V or less	2000	600	600	600
220V or less	2000	600	600	500
110V or less	2000	600	500	300
60V or less	2000	500	300	150

4. When identifying intrinsically safe circuits by color, use light blue terminal blocks and cables.
5. When using two or more EB3C's to set up one intrinsically safe circuit in the common wiring configuration, interconnect two neutral terminals (N1 through N10) on each EB3C between adjacent EB3C's in parallel.
6. Make sure that the power of the EB3C and contact are turned off before starting inspection or replacement.
7. When wiring the intrinsically safe circuit, determine the distance to satisfy the wiring parameters shown below. Note that parameters are different

between separate wiring and common wiring.

- a. Wiring capacitance $C_w \leq C_o - (C_i + N \times 2 \text{ nF})$
 C_o : Maximum external capacitance of the EB3C
 C_i : Internal capacitance of the switch
 N : The number of switches connected in series or parallel (the number is infinite)
- b. Wiring inductance $L_w \leq L_o - (L_i + N \times 5 \text{ } \mu\text{H})$
 L_o : Maximum external inductance of the EB3C
 L_i : Internal inductance of the switch
 N : The number of switches connected in series or parallel (the number is infinite)
- c. Wiring resistance $\leq R_w$
 R_w : Allowable wiring resistance
- d. Allowable wiring distance D (km) is the smallest value of those calculated from the capacitance, inductance, and resistance.
 $D \leq C_w/C$ C (nF/km): Capacitance of cable per km
 $D \leq L_w/L$ L (mH/km): Inductance of cable per km
 $D \leq R_w/2R$ R (Ω /km): Resistance of cable per km

Note: For the details of wiring the intrinsically safe circuits, refer to a relevant test guideline for explosion-proof electric equipment in each country.

8) Applicable Wire Size

0.5 to 2.0mm² (AWG20 to AWG14): two wires

However, one wire for 2.0 mm² (AWG14)

Mounting Bracket

The following mounting brackets can be used to install the EB3C relay barriers and EB3L lamp barriers on the mounting holes of IBRC contact signal transducer, IBPL pilot relay barrier, and IBZ buzzer.

No. of Channels	Part No.	Dimension (mm)		
		A	B	C
1	EB9Z-K01	28.0	44.0	61.0
2	EB9Z-K02	51.0	59.5	76.0
3	EB9Z-K03	51.0	75.0	91.5
5	EB9Z-K05	97.0	105.0	122.0
6	EB9Z-K06	97.0	120.0	137.0
10	EB9Z-K10	97.0	181.0	198.0

Dimensions

All dimensions in mm.
